Building Temporary Roads and Hoardings

GroundMate ground protection mats provide incredible value and efficient ground cover. Suitable for pedestrian and medium to heavy weight vehicular traffic, it is currently available in grey with an anti-slip tread pattern finish on one side and a 'diamond embossed' finish on the opposite side

GroundMate LT (lite) is a thinner mat designed to provide highly effective cover for hard, firm and/or decorative surfaces that need protection from vehicles, such as forklift and cart traffic. It is lightweight, cost-effective, simple to install and requires no fixings. As it can be used repeatedly, it provides a more professional and cost effective solution than plywood.

Manufactured exclusively by Centriforce Products, **Stokbord**® is an extremely tough & durable, general purpose, value for money board manufactured from 100% recycled plastic, including agricultural farm film. It can be fabricated and welded for a variety of building needs, and it offers many benefits over traditional plywood.

Centriforce Products has developed a unique hoarding product manufactured from 100% recycled plastic material. Using tried and tested manufacturing techniques, our hoarding product fulfils a growing demand from the building industry for a more sustainable and environmentally friendly product. The hoarding offers a sustainable and durable alternative to plywood, which can be used on site many times and then recycled after use, helping organisations to reduce their carbon footprint while contributing to their corporate responsibility objectives.
