## Event flooring

**Portapath** is perfect for every outdoor event, providing safe temporary access areas and pedestrian pathways. **Portapath's** rugged anti-slip surface protects turf and prevents soil compaction. An excellent all weather, all year round surface, providing an innovative and reliable alternative to traditional flooring systems.

**Terraflor** provides Event Flooring for Stadiums and Sports arena's when the playing field is being used for non-sport events. It allows a passage of air and light to create a moist atmosphere under the tiles, without the build-up of heat. These are essential elements for keeping grass healthy and green.

**Terratile** is an Event Flooring that is designed to protect turf where pedestrian only access will occur. It allows the passage of air and light to create a moist atmosphere under the tiles, without a build-up of heat. These are essential elements for keeping grass healthy and green. It is also designed to prevent rubbish and non-desirable liquids from passing through to the turf – whether natural or artificial.

**Terraturf** is one of the “budget” range manufactured in the UK by Terraplas plc – the World’s No. 1 Turf Protection company. It is designed for pedestrian use to protect the turf playing area at Stadiums when they are being used for non-sporting events. It allows the passage of air and light and each tile overlaps it’s adjacent tiles to prevent rubbish and non-desirable liquids from passing through to the turf – whether natural or artificial.
