Heavy Duty Ground & Turf Protection

GroundMate ground protection mats provide incredible value and efficient ground cover. Suitable for pedestrian and medium to heavy weight vehicular traffic. It is currently available in grey with an anti-slip tread pattern finish on one side and a 'diamond embossed' finish on the opposite side.

GroundMate LT (lite) is a thinner, lighter mat designed to provide a highly effective ground cover for hard, firm and/or decorative surfaces that need protection from light vehicles and pedestrian traffic. Lightweight, cost-effective, simple to install and requires no fixings. As it can be used repeatedly, it provides a more professional and cost effective solution than plywood.

Terratrak Plc have used the latest computer aided design and testing to create a product that meets the challenges and requirements of industry needs.

Terratrak is designed to take the weight and stresses exerted by forklifts and 100 ton cranes as used in outdoor concert business.

Terratrak Plus is specifically designed for use in stadiums and large arenas during concert load-in and load-out. For years promoters have been looking for a product which would enable them to bring in 150 tonne cranes, forklifts and trucks onto the stadium field without causing significant damage. **Terratrak plus** can be laid by hand, is made from high density polyethylene, and will allow grass to grow normally while laid.
