Hoardings

Centriforce Products has developed a unique hoarding product manufactured from 100% recycled plastic material. Using tried and tested manufacturing techniques, our hoarding product fulfils a growing demand from the building industry for a more sustainable and environmentally friendly product. The hoarding offers a sustainable and durable alternative to plywood, which can be used on site many times and then recycled after use, helping organisations to reduce their carbon footprint while contributing to their corporate responsibility objectives.

Manufactured from 100% recycled plastic material, the Hoardings offer a significant long term cost savings compared to timber or plywood. They can be used over and over and are 100% recyclable when finished with. The Hoardings also provide the company the ability to advertise their brand, along with the fact that they are being environmentally friendly.
