Turf Protection Products

Portapath is perfect for every outdoor event, providing safe temporary access areas and pedestrian pathways, whatever the size. **Portapath's** rugged anti-slip surface protects turf and prevents soil compaction. An excellent all weather, all year round surface, providing an innovative and reliable alternative to traditional flooring systems

Terraplas® turf protection is used in stadia worldwide, enabling them to be multi-purpose special event venues for concerts, exhibitions, dinners and religious ceremonies. **Terraplas**® is also used extensively in other venues such as public parks, racecourses and stately homes for walkways, exhibitions, show stands and hospitality areas.

Terraflor protects turf at Stadiums and Sports Arenas when the playing area is used for non-sporting events. Designed to protect the turf at Stadiums and Sports Arena's when the playing area is being used for non-sporting events. It allows the passage of air and light and creates a moist atmosphere under the tile, without build-up of heat. These are the essential elements for keeping grass healthy and green.

Terratile is the latest system manufactured in the UK by Terraplas plc. - The World's No.1 Turf Protection company. It is designed to protect the turf playing area at Stadiums when they are being used for non-sporting events. It allows the passage of air and light and creates a moist atmosphere under the tile, without any noticeable build-up of heat - essential elements for keeping natural grass healthy and green.

Turf Protection Products (cont)

Terraturf is one of the “budget” range manufactured in the UK by Terraplas plc. – the World’s No. 1 Turf Protection company

Terracover V has been designed to protect artificial turf or natural grass, but with speed and ease of installation. It bears the weight of forklifts and cherry pickers, is totally interlocking and looks good at a reasonable price.

Terraturf is one of the “budget” range manufactured in the UK by Terraplas plc. – the World’s No. 1 Turf Protection company. **Terraturf** is designed for pedestrian use to protect the turf playing area at Stadiums when they are being used for non-sporting events. It allows the passage of air and light and each tile overlaps its adjacent tiles to prevent rubbish and non-desirable liquids from passing through to the turf – whether natural or artificial.

For years Promoters have been looking for a product which would enable them to bring 150 tonne cranes, forklifts and trucks onto the stadium field without causing significant damage. In the past they have used plywood or aluminium panels, with disastrous effect. Now however, terraplas plc. have developed **terratrak plus**®, which can be laid by hand and is manufactured from translucent high density polyethylene plastic that allows grass to continue growing normally – which will keep the Ground staff happy!!

Terratrak has been designed to withstand the weight and stress exerted by forklifts and 100 ton cranes. It is light enough to be put in position by hand and with its overlapping design and unique locking system it creates a continuous surface free from gaps and other potential trip hazards. Terratrak comes in three formats;

Terratrak – NF – This version of Terratrak has no feet on the bottom

Terratrak – WF – With the addition of patented feet

Terratrak – FB – With the addition of a flat panel on the underside
